SUMMARY

Full-Stack Developer with 1.5+ years shipping end-to-end products across React/Next.js, PHP (Laravel/WordPress), and Flutter. Solely designed and launched a live cross-platform mobile app used at events, alongside custom dashboards and CMS-driven platforms. Comfortable owning a product from architecture to deployment.

EXPERIENCE

ET Edge (Times Group)

December 2025 - Present

Executive Web Developer

- Single-handedly designed and shipped a cross-platform mobile app (Flutter) for iOS and Android that syncs content from ET Edge Insights (WordPress), live on the App Store and Google Play.
- Built the app's backend (Express.js, PostgreSQL) and a custom React admin dashboard for event management, invite approvals, and QR-code-based digital event passes.
- Developed custom jury voting and nomination-shortlisting dashboards (React, Express.js, PostgreSQL) for major summits, and build/maintain React + WordPress CMS event websites for ET Edge An Times Group Initiative.

Kayana World

August 2025 - December 2025

Frontend Developer

- Engineered a full-scale UI/UX revamp of the partners admin dashboard using React.js and Tailwind CSS, improving code maintainability and user experience for a major version update.
- Developed new dashboard modules including a "Ticket Tailor" booking system and Staff Shift Scheduling tool, and spearheaded a new merchant admin platform using Laravel.
- Maintained and enhanced the legacy Kayadmin platform (CodeIgniter), resolving bugs and shipping feature enhancements.

Kayana World

January 2025 - July 2025

PHP Developer Intern

- Developed and enhanced custom WordPress themes and web ordering plugins from scratch, using PHP, JavaScript, HTML/CSS, and Bootstrap to build complete food ordering websites.
- Engineered a custom payment gateway plugin for WordPress, allowing businesses to feature Kayana as a payment provider.
- Implemented Custom Post Types (CPT) and complex functionalities for the custom themes, improving web ordering load times and increasing customer satisfaction.

House of Couton

January 2024 - December 2024

Freelance Full Stack Developer

- Managed the complete development lifecycle for over 10 full-stack projects from initial concept and design to final deployment.
- Designed and implemented responsive UI/UX wireframes in Figma, building pixel-perfect frontends with technologies like React.js, Next.js, and Tailwind CSS.
- Engineered backend solutions using Node.js and PHP, integrated with MySQL, PostgreSQL, and MongoDB databases.

PROJECTS

Cross-Platform Event Companion App (Flutter) Solely designed and built a mobile app for iOS/Android, live on the App Store and Google Play, with an Express.js/PostgreSQL backend and a React admin dashboard for invite approvals and QR-code event passes.
